Physical Therapy

| Coplestone's Orbiter is a posts and ball toss game, action skill game, and an art in motion sculpture.

| This decorative entertaining game is a pendulum device to showcase a players eye to hand coordination skills.

| The object is to set the ball in motion, from one taller uniquely angled post in order to sink the ball into the cup on the second shorter conversely angled post.

| Players are challenged to learn six orbiter swings, each one different with increasingly difficult swing paths. Once you understand how and why the ball moves through space you will be able to perform the swings with confidence.

| The Orbiter ring toss story began years ago at the Admirals Inn on the island of Antigua. The games creator David Coplestone was taking a sailing trip through the Caribbean in 1980. It was there that he joined a long line of people playing a Bimini ring toss game. The smiles on the faces and the wear on that hook showed this pastime's popularity. As David played, he thought, "If there was a desktop version of this game, millions of people could enjoy it." In 1990 the Orbiter was launched and has been evolving and entertaining ever since.

**Wing it!
Fling it!
Swing it!**

do whatever
it takes to
SINK IT!

| The Orbiter is similar to the executive gift Newton's Cradle in that they are both pendulum devices, used to demonstrate the laws of motion, and to serve a decorative function for the home and office. Newton's Cradle and the Orbiter are part of a group of toys known as "art in motion toys".

Put it In.

Knock it off.

*The Orbiter 6' model has an accessory post that when inserted into the cup changes the object of the game to: sink the ball into the cup for swings 1, 2, and 3 and knock the egg off the post for swings 4, 5, 6, and 7.
